

# HOTEL MANAGEMENT AUTOMATION

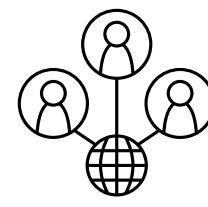

**Zübeyir Kaan Zünbülcan - 191228**

**Advisor: Dr. Cem Kalyoncu**

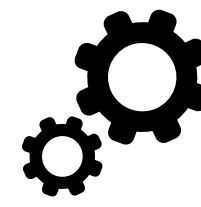

## Description

The Hotel Management Automation project aims to revolutionize the industry with its integrated web-based reservation system and desktop application that controls all hotel operations.

## Benefits

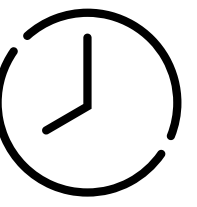

**Real-Time Updates and Communication**

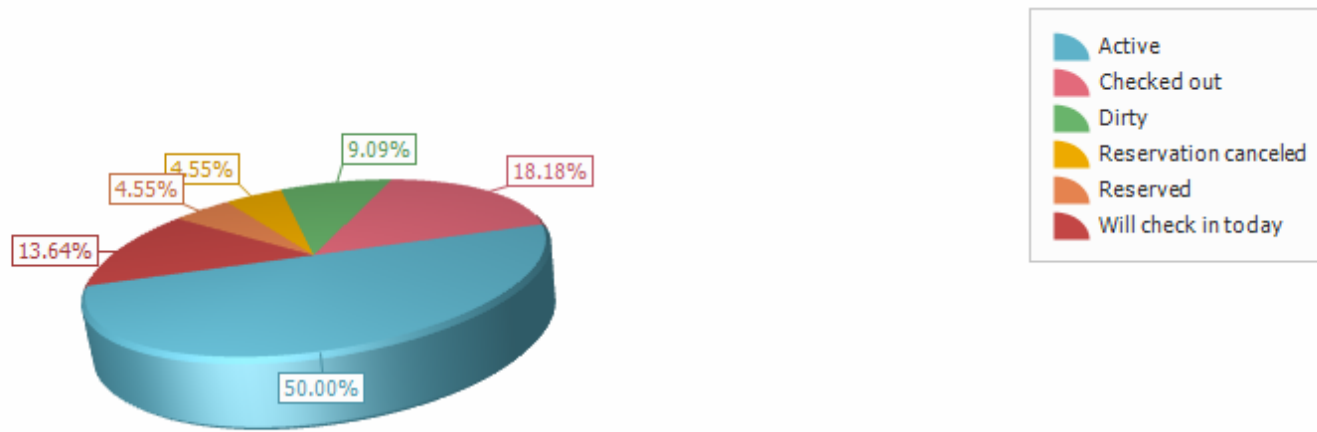

**More manageable**

**Reduced paper consumption**

**Saving on time**

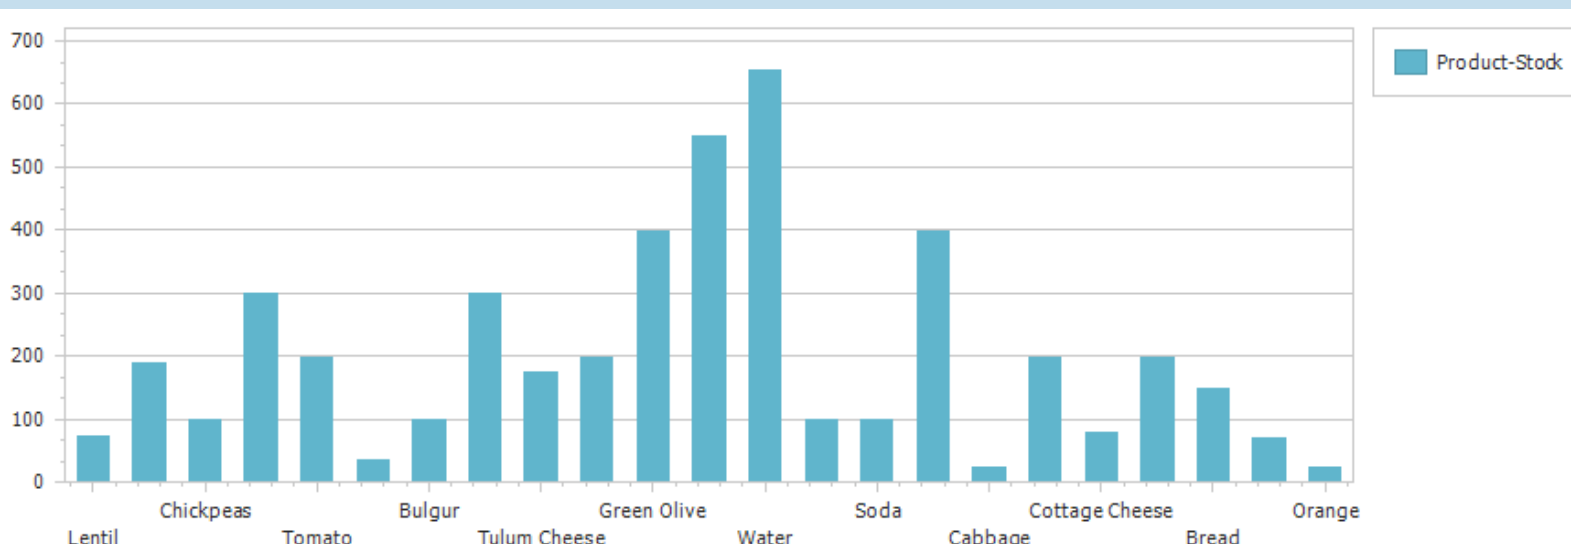

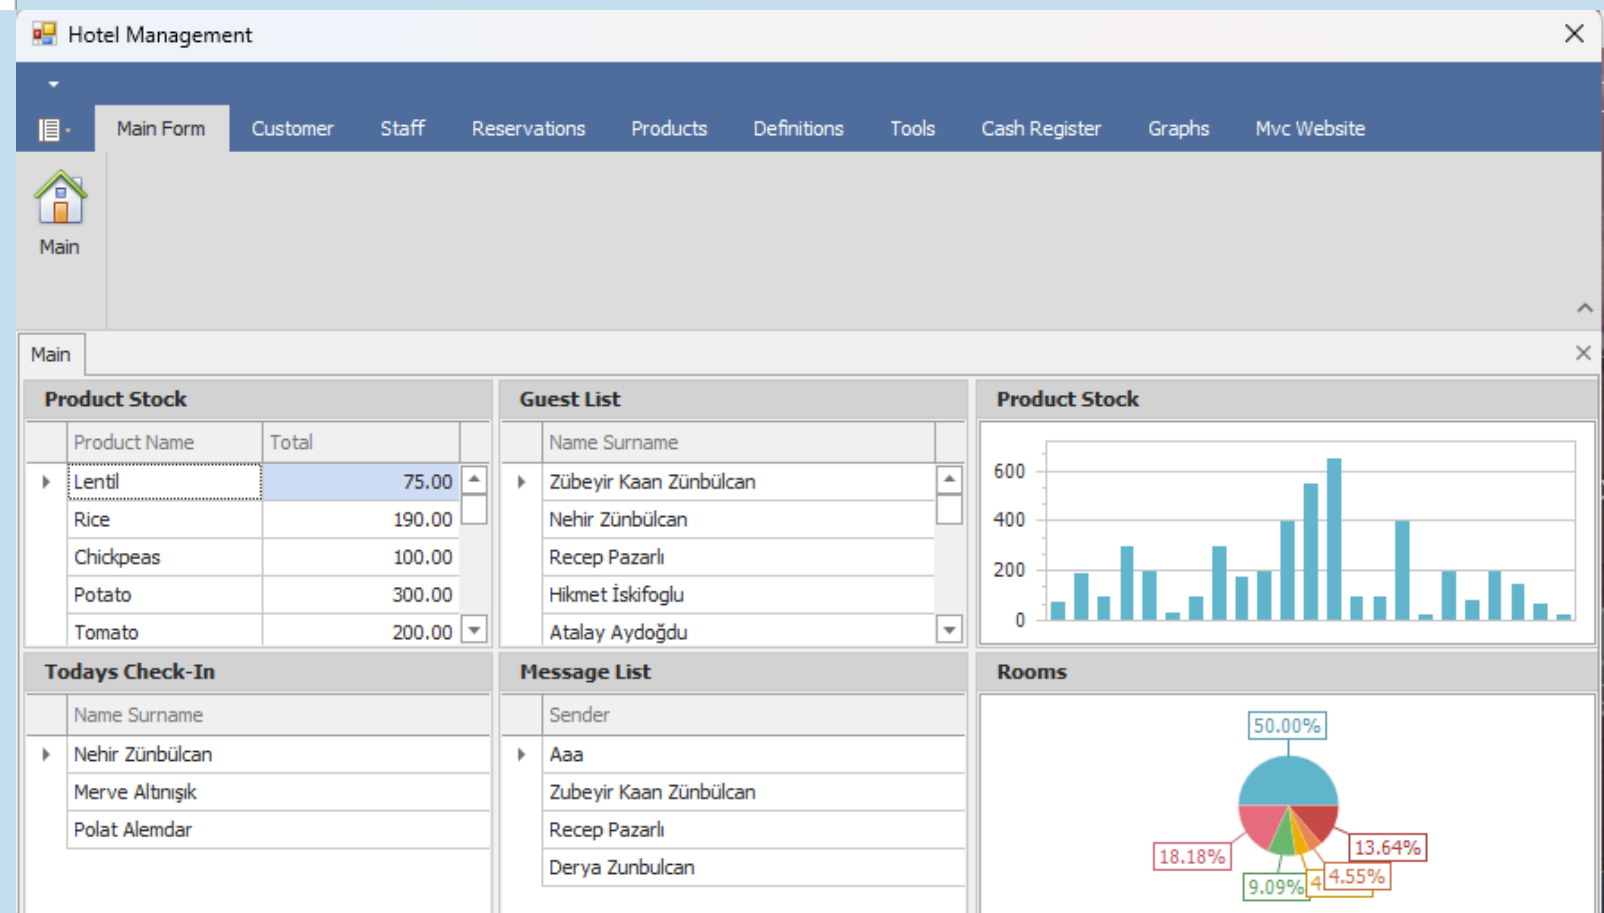

## Objective

Streamlining hotel management processes, increase guest satisfaction, facilitating online reservations, optimizing revenue management, and providing exceptional service through an automated system.

## Conclusion

As a result, this project represents a significant innovation in the accommodation sector. By integrating the web-based reservation system into a desktop application to manage all hotel operations, this project aims to streamline hotel management processes, increase efficiency and improve customer service. This comprehensive approach to automation demonstrates a commitment to leveraging technology to modernize the hotel industry, potentially setting new standards for hotel management and operations.
